SERVICES

Our Experience at Your Service

CAD Schroer is your ideal partner for engineering software services. We combine strong engineering expertise with highly-skilled IT teams. Many of our staff members are mechanical engineers, and our software experts have wide and deep experience in the areas of Engineering Design, Computer Aided Design (CAD), Engineering Systems, Graphical Systems, and Web-based solutions.

CAD Schroer's consultancy services help clients all over the world to combine the best technologies with optimised design processes for engineering productivity. Our experts understand your business and your challenges, helping you to tackle your Product Lifecycle Management (PLM) and Product Data Management (PDM) issues. We work in close partnership with customers, who know us as approachable and personable, skilled and professional, dedicated and committed.

Design Automation Consultancy

Our products' customisability means that any repetitive design and data management tasks requiring a consistent set of input variables can be automated, saving immense amounts of time, cutting errors, guaranteeing consistency, and improving quality. Our engineers can quickly pinpoint opportunities for design automation - often a relatively small customisation can reduce design times from days or hours to minutes, quickly recouping any consultancy costs.

Training

Thorough training is the key to gaining a rapid return on your software investment. We can get your staff up to speed quickly by offering standard product training, as well as bespoke courses to suit specific requirements – delivered on-site, at our local training facilities, or flexibly via the Web.

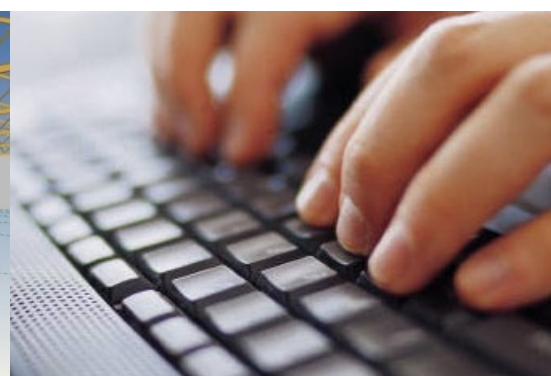

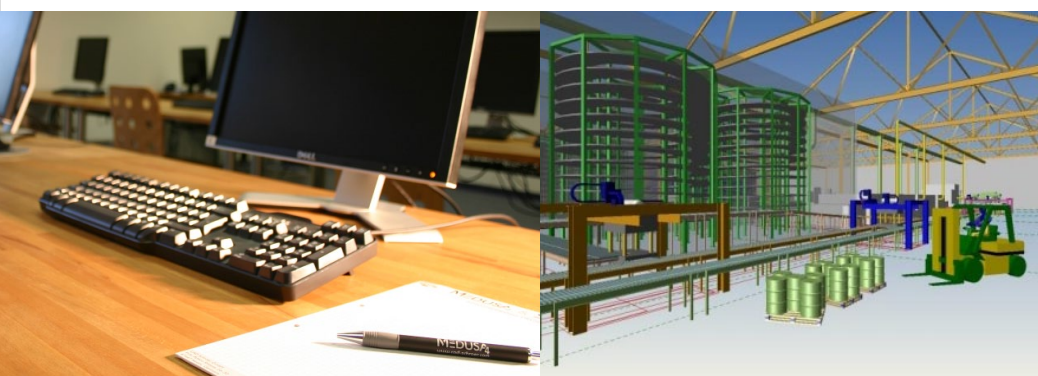

We also offer personalised hands-on workshops, and individual support in your design offices.

Technical Support and Maintenance

Our experienced software engineers work closely with customers throughout the world. We provide support and maintenance for our standard products, as well as for any customisations we develop.

Product-based Consultancy

CAD Schroer offers a comprehensive range of services all around the products in our extensive portfolio, fully scoped and project managed - from systems implementation to customisation and data translation services.

Factory Modelling Services

Our factory modelling services allow Owner/Operators to obtain a 3D lifecycle model of their existing installation and gain control over their layout, crucial for planning changes.

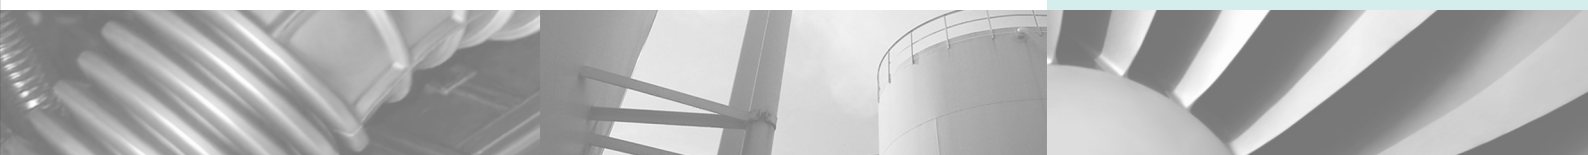

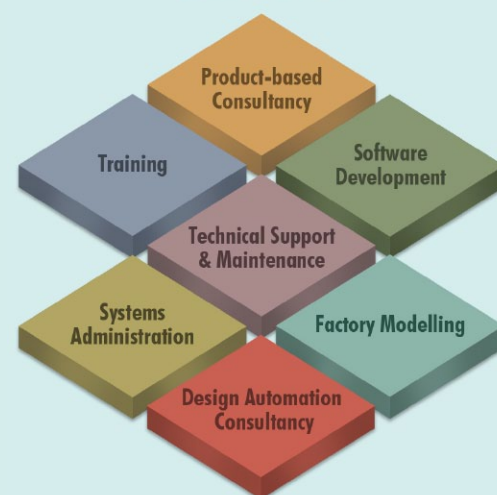

We can model your factory based on any designs you supply - paper drawings, 2D CAD files, or 3D machinery models. We flag up inconsistencies along the way, and where no up-to-date drawings exist, we can arrange laser scanning of your factory, gaining the data we need to create a 2D layout and 3D model.

Software Development

Not only do our software experts develop our own products - we also deploy their skills to ensure that you get the most out of your systems.

CAD Schroer can develop customisations to fully automate your repetitive design tasks; interfaces to ensure that your systems can talk to each other; or entirely new applications for niche requirements. We have decades of experience developing complex and graphical software, and our services cover the full product lifecycle.
